Important information for the user

Thank you for choosing this Jura product.

Please study these instructions carefully before using your new machine and keep them in a safe place for easy reference in the future.

Should you require further information or should particular problems occur that are not dealt with in these operating instructions in sufficient detail for you, then please ask your local dealer for the information you require or contact us directly.

1. Description

This fully-automatic espresso/coffee machine impresses because of its compactness and can prepare 1 or 2 cups of excellent, professional-quality espresso/coffee with guaranteed froth at the same time. The unique Jura Pre Brew Aroma System/P.B.A.S© ensures a full coffee aroma. The machine functions fully automatically at the press of a button. You have the choice of normal, strong or extra-strong coffee aroma, to suit your personal preference. The integrated grinder grinds beans to precisely the fineness you require. A separate filler funnel also enables you to use an additional sort of pre-ground coffee. The water volume is individually adjustable. Electronic monitoring of levels in the water tank and the grounds container simplify operations. The integrated rinsing, cleaning and decalcifying programs facilitate care and maintenance.

1. Meaning of symbols in the display

1. COFFEE READY
2. COFFEE STRONG/EXTRA STRONG
3. POWDER COFFEE
4. RINSE MACHINE
5. FILL WATER
6. EMPTY GROUNDS CONTAINER/DRIP TRAY MISSING
7. CLEAN MACHINE
8. MACHINE FURRED

2. Safety instructions

2.1 Warnings

- Children are unaware of the dangers that electrical machines represent. Therefore children should never be left alone with electrical machines unsupervised.
- This machine should only be used by people who have read and understood the operating instructions.
Never use a faulty machine or one with a damaged power cable.
Never immerse the machine in water.

2.2 Safety precautions

Never expose the machine to the effects of rain, snow or frost and never operate it with wet hands.
Place your espresso/coffee machine on a solid level surface. Never leave it on a surface that is warm or hot (hob etc.). Choose a location that is inaccessible for children or pets.
Remove plug from power socket if an absence for a longer period of time (holidays etc.) is planned.
Always remove plug from power socket before cleaning.
When removing plug from power socket, never tug on the cord or on the machine itself.
Never repair or open the machine yourself. All repairs should be performed only by authorised service centres using original Jura spare parts and accessories.
The machine is connected to the mains power socket via an electric cable. Ensure that no one trips over this cable and pulls down the machine. Keep children and animals away.
Never put the machine or even parts of it in the dishwasher.
To prevent overheating put the machine in an airy place.
If you are using an acid-based descaling agent, it is important to avoid any splashed or drips on sensitive kitchen surfaces, particularly those in natural stone or wood. If they do occur, they should be removed immediately.

3. Check before use

3.1 Checking mains voltage

The machine is set for the correct voltage before leaving our factory. Ensure that your mains voltage corresponds to the details quoted on the rating plate attached to the bottom of the machine.

3.2 Checking fuse

The machine is designed for a current of 10 amps. Check that an appropriate fuse is fitted.

3.3 Filling water tank

Remove water tank and rinse well with cold clean tap water.
Fill the tank and replace it in the machine. Ensure that the tank clicks correctly into place (Fig. 1).

Note: Use only clean cold water. Never fill the tank with milk, mineral water or any other liquid. You can also top the tank up with water without removing it from the machine. Simply pull up cover and pour water into the tank from above. Put cover back in its original position.

3.4 Adding coffee beans

Lift up cover of the bean container (11).
Clean out any dirt or alien elements from the bean container.
Fill the grinder container with coffee beans and close the cover.

3.5 Adjusting grinder

You can adjust the grinder to the roast of your coffee. We recommend the following:

for a light roasting → a finer adjustment
for a dark roasting → a coarser adjustment

Open the cover of the bean container (11).
To adjust grinding turn selector switch (Fig. 2) to the wanted position.
You have the following possibilities to adjust the grade of grinding
the smaller the dots, the finer the grinding
the bigger the dots, the coarser the grinding

Important: The grinding grade should only be adjusted while
the grinder is working.

3.6 Adjusting for water hardness

The water is heated inside the machine. With use, this leads to
calcium deposits (furring) forming on the machine. This is automatic-
ically indicated in the display. For this reason, it is necessary to
adjust the machine to the hardness of your local water before you
use it for the first time. Use the enclosed test-sticks for this purpose.

Note: 1° water hardness on the German scale represents
1.79° on the French scale.

The machine has got 5 hardness settings to choose from. The
chosen grade is shown on the display.

Legend:  = flashes
     = lights up

Level 0 = Setting for Claris filter
cartridges Display
The display for automatic
decalcifying is switched off.

Level 1
German water hardness 1° – 7°
French water hardness 1.79° – 12.53°

Level 2
German water hardness 8° – 15°
French water hardness 14.32° – 26.85°

Level 3
German water hardness 16° – 23°
French water hardness 28.64° – 41.14°

Level 4
German water hardness 24° – 30°
French water hardness 42.96° – 53.7°

The machine is adjusted to Level 3 before it leaves the factory.
You can alter this setting by simply following the instructions
below:

- Pull the mains lead with its plug out from the cable box at the
  rear of the machine.
- Put the mains plug into the wall socket.
- Leave the machine switched off.
- Press the button  for about 3 seconds. Now warning lamp
  (Level 3) flashes.
- Choose the required setting by pressing button  and press
  button  to store in memory. The warning lamps go out.
Note: It is only necessary to adjust the water hardness before the machine is used for the first time or when a different quality of water is used. If no water hardness level is changed within 30 seconds, the display goes out and the last value programmed remains unchanged.

3.7 Adjustable automatic close-down
You can adjust the automatic close-down of 2 hours set by Jura to your own requirements. The machine provides 3 different levels:

1st Level
Warning lamp  flashes.
The automatic close-down is not activated.

2nd Level
Warning lamp  flashes, warning lamps  light up.
Automatic close-down is set to 2 hours.

3rd Level
Warning lamp  flashes, warning lamps  light up.
Automatic close-down is set to 5 hours.

To set or alter the automatic close-down follow the instructions below:
- Put the mains plug into the wall socket.
- Leave the machine switched off.
- Press button for about 3 seconds and choose the required setting by pressing button .
- Push button to store level in memory .

Note: If no change to the setting level is made within 30 seconds, the warning lamps go out and the last level stored remains effective.

4. Preparing machine
4.1 Filling the system with water
- Press button  to switch on the machine.
- Warning  lamps flash.
- Place an empty cup under the pivoting nozzle (13).
- Turn selector switch for hot-water/steam (12) to position .
  Now the machine gives off water. Warning lamps  flash. The water flow is stopped automatically.
- Turn back selector switch for hot-water/steam (12) to position .

5. Rinsing the machine
If warning lamp  flashes, the machine needs rinsing.
- Place an empty cup under the coffee-spout.
- Press button . The rinsing is stopped automatically.

Note: If the machine has been switched off and has already cooled down it will be necessary to carry out this rinsing function when the machine is switched on again. After switching off the machine, the rinsing sets off automatically.

6. Adjusting water volume
Water volume is infinitely adjustable by means of the selector switch (1). The small cup means a small volume of water for espresso, the big cup means a larger volume of water for coffee. ll cup means a small volume of water for espresso, the big cup means a larger volume of water for coffee.

Tip: You can also change the water volume while coffee is being drawn off. Simply turn the selector switch (1) to give more or less water.

Note: If you press button  the machine automatically doubles the amount of water and divides it between two cups.
7. Drawing off espresso/normal coffee

Switch on the machine by pressing button. The machine is ready as soon as the warning lamp lights up.

- Place 1 or 2 cups under the coffee-spout and press the appropriate button. The pre-brew function (P.B.A.S) moistens the coffee powder, briefly interrupts the flow and then the real brewing process begins.

Note: You can interrupt the flow of coffee at any time by simply pressing any one of the coffee buttons.
Tip: Adjust the coffee-spout height to the size of your cups to obtain a perfect head of froth (Fig. 3).

7.1 Drawing off espresso/strong coffee

- Place 1 cup under coffee-spout (9) and press the required button until the warning lamp lights up. Warning lamp flashes.

Note: You can only draw off 1 cup of strong coffee at a time.

7.2 Drawing off espresso/extra-strong coffee

- Place 1 cup under coffee-spout (9).
- Press the required button until warning lamps, , flash.

Note: You can only draw off 1 cup of extra-strong coffee at a time.

7.3 Using pre-ground powder coffee

- Press button. Warning lamps and light up.
- Now put 1 or 2 level measuring spoons of pre-ground coffee (Fig. 4) into the powder funnel (10).

Important: Never use soluble instant coffee or quick coffee. Only use coffee powder from freshly ground beans or pre-ground vacuum-packed coffee. Never fill the funnel with more than 1 or 2 portions at a time. The powder funnel is not intended as a storage container.

Note: If button is pressed by mistake, this can be corrected by pressing button . The machine rinses.
Tip: We recommend a regular cleaning of the funnel with a bottle-brush after drawing off powder coffee.

8. Using steam

Steam can be used for heating up liquids as well as for frothing up milk for cappuccinos. To heat up liquids remember to push the frothing nozzle (14) up. For frothing up liquids push the nozzle down (Fig. 5).

- Put a cup under the pivoting nozzle (13).
- Immerse the frothing nozzle (14) into the milk you want to froth or into the liquid you want to heat up. Turn selector switch for coffee or hot-water/steam (12) to position (Fig. 5).
- To stop steam-function turn selector switch for coffee or hot-water/steam (12) back to position .
- Warning lamps , , , flash.
- If you would like to draw off coffee right after drawing off steam, proceed as described in chapter 8.1.

Note: The max. drawing off time for steam is about 8 minutes. Due to the start frothing. This water should be drawn off before drawing off steam. However the perfect result (e.g. of frothing milk) is not influenced.
Important: When steam is first drawn off, there is a possibility of spattering. The pivoting nozzle becomes hot. Avoid direct contact with the skin.

8.1 Resetting to stand-by status

- Place a container under the pivoting nozzle (13).
- Turn selector switch for hot-water/steam (12) to position .
- Push button and draw off water until water-flow is automatically stopped. Warning lamps , , , flash.
- Then turn back selector switch for hot-water/steam (12) to position .

Tip: Whenever you have finished drawing off steam clean the pivoting nozzle with a damp cloth.

9. Drawing off hot-water

- Place a cup under the pivoting nozzle (13) and turn selector switch for hot-water/steam (12) to the symbol .
- Press button . The machine will now deliver hot-water.
- To stop this process turn back selector switch for hot-water/steam (12) to the symbol .

Important: When hot-water and steam are first drawn off, there is a possibility of spattering. The pivoting nozzle becomes hot. Avoid direct contact with the skin.

10. Switching off machine

When the machine is switched off, the rinsing program is automatically run again. Place an empty cup under the coffee-spout and press button. When the rinsing water has run into the cup, the machine powers down. Discard the water.

11. Care and maintenance

11.1 Fill water

When warning lamp lights up no more coffee can be drawn off. Top up water as described in chapter 3.3.

11.2 Empty grounds container

Coffee grounds are collected in the grounds container. When warning lamp lights up, all coffee buttons are blocked and you must empty the grounds container.

- Push up coffee-spout (9).
- Remove drip tray. Do this carefully as there is water in it.
- Remove and clean drip tray (Fig. 6) and grounds container. First replace grounds container and then drip tray (Fig. 7).

Important: Whenever grounds container is emptied, empty drip tray too.

11.3 Drip tray is missing

If the drip tray is not replaced correctly, warning lamp flashes.

Note: When the drip tray is outside the machine you can take the opportunity to clean the inside of the machine. Wipe off any of coffee powder with a damp cloth. Then replace clean drip tray.

11.4 Clean machine

After coffee etc. has been drawn off 200 times or 160 rinse programs have been run, the machine must be cleaned. Warning lamp will remind you. You can still draw off coffee and hot-water/steam. However we recommend that you clean the machine (as described in chapter 12) within the next few days. Warning lamp does not go out until the complete cleaning process has been carried out.
11.5 Machine furred
Your machine will become furred in the course of normal use. The amount of furring depends on the hardness of your water. The machine registers when descaling becomes necessary and signals this via warning lamp \( \text{I} \). You can still draw off coffee and hot-water/steam. However, we recommend that you descale the machine (as described in chapter 13) within the next few days. Warning lamp \( \text{I} \) does not go out until the complete descaling process has been carried out.

11.6 Use of Claris filter cartridges
At the correct use of Claris filter cartridges, descaling of the machine becomes unnecessary. For further information, please read the instructions for use attached to the water tank.

Note: Furring display must be switched off (as described in chapter 3.6) before using Claris filter cartridges.

11.7 General cleaning instructions
- Never use sharp or abrasive articles or corrosive chemicals to clean your machine.
- Wipe down the casing inside and out using a soft damp cloth.
- Clean the pivoting hot-water/steam nozzle every time it is used.
- After warming milk, draw off a little hot-water to clean the pivoting nozzle inside.
- You can take off the pivoting nozzle for a thorough cleaning (Fig. 8).
- The water tank should be rinsed out and filled with clean water daily.

Note: If you notice any furring in the water tank, this can be descaled separately with a customary descaling product. Remove the tank from the machine in order to do this.

11.8 Regular servicing
Regular Jura services ensure your machine’s reliability and longer life. Keep the original packaging to protect the machine when it is transported.

11.9 Empty system
Important: This process is necessary to protect the machine from frost damages while being transported.

- Press button \( \text{O} \) to switch off the machine.
- Place a container under the pivoting nozzle (13).
- Turn selector switch for hot-water/steam (12) to position \( \text{O} \).
- Press button \( \text{O} \) to switch on the machine. Warning lamps \( \text{i}, \text{w}, \text{m} \), \( \text{w} \) flash.
- Press button \( \text{O} \) until only warning lamp \( \text{w} \) flashes. Steam comes out after a short time.
- Draw off steam until it stops automatically.
- Turn selector button for hot-water/steam (12) back to position \( \text{O} \).

12. Cleaning
The machine has an integrated cleaning program.

Note: Whenever the machine needs cleaning, warning lamp \( \text{O} \) lights up. You can still draw off coffee and hot-water/steam and run the cleaning program later. Only use Jura cleaning tablets. These are available from your Jura dealer.

Important: It is essential not to interrupt the process once it has been started.
Switch on machine by pressing button.

Push button for about 3 seconds. Warning lamps , light up.

Fill water tank.

Empty drip tray and grounds container and replace them. Warning lamps (if necessary) light up.

Place a container under the coffee-spout (9).

Put a Jura cleaning tablet (Fig. 9) into the powder funnel (10).

Press selector button . The warning lamp goes out.

Warning lamp flashes.

The flashing of warning lamp indicates that the cleaning process is activated.

If warning lamp lights up, empty drip tray (if necessary), wait about 10 seconds before replacing it. Warning lamp goes out.

Replace the container under the coffee-spout (9) and press button .

The cleaning process is continued.

If warning lamp lights up again, empty drip tray (if necessary), wait about 10 seconds before replacing it. Warning lamp goes out.

Replace the container under the coffee-spout (9) and press button .

The cleaning process is continued. At the end of it, warning lamp lights up.

Empty drip tray and grounds container and replace them.

Replace container under the coffee spout (9) and press button . The machine rinses and warning lamp lights up.

Tip: Clean powder funnel with a bottle-brush.

13. Decalcifying

Your machine has an integrated decalcifying program. If a Claris filter cartridge is used there is no need for decalcifying your machine. Please use Jura decalcifying tablets only. These are available from your Jura dealer.

Note: If the machine needs decalcifying warning lamp lights up. You can still draw off coffee and hot-water/steam and run the decalcifying program later.

Important: Run the decalcifying program only after the machine has been switched off for at least 2 hours and has cooled down completely. The decalcifying program is started with the machine switched off. The running decalcifying program must not be interrupted.

Switch off machine by pressing button and let the machine cool down for 2 hours.

Then remove water tank.

Press button for about 3 seconds. Warning lamps , light up.

Pour 0,5 litres of water into a container and completely dissolve the contents of a blister pack (2 tablets). Then fill the mixture into the water tank.

Empty drip tray and replace it. Warning lamps , , light up.

Pour, , , flash and warning lamp lights up.

Place a sufficiently big container under the pivoting nozzle (13). Turn selector switch for hot-water/steam (12) to position .
The flashing of warning lamp \[\text{II}\] indicates that the decalcifying program is activated.

- If warning lamp \[\text{II}\] lights up, empty drip tray (if necessary). Warning lamps \[\text{I}, \text{II}, \text{III}, \text{IV}\] flash and warning lamp \[\text{II}\] lights up.
- Turn selector switch for hot-water/steam (12) back to position \[\text{II}\].

The decalcifying program is continued and the decalcifying solution is channelled inside the machine to the drip tray.

- Warning lamp \[\text{III}\] flashes and warning lamps \[\text{I}, \text{II}, \text{III}\] light up.
- Important: Fill water tank with fresh water and replace it.
- Empty drip tray (if necessary) and replace it. Warning lamps \[\text{I}, \text{II}, \text{III}, \text{IV}\] flash and warning lamp \[\text{II}\] lights up.
- Put a sufficiently big container under the pivoting nozzle (13). Turn selector switch for hot-water/steam (12) to position \[\text{I}\]. Warning lamps \[\text{III}, \text{IV}\] flash.

The decalcifying program is continued.

- Warning lamp \[\text{III}\] flashes and warning lamps \[\text{I}, \text{II}\] light up.
- Empty drip tray (if necessary) and replace it. Warning lamps \[\text{I}, \text{II}, \text{III}, \text{IV}\] flash and warning lamp \[\text{II}\] lights up.
- Turn selector switch for hot-water/steam (12) back to position \[\text{II}\]. Warning lamps \[\text{III}, \text{IV}\] flash.

14. Disposal

For correct disposal, you should return your coffee machine to your dealer, Jura service centre or Jura Elektroapparate AG.

15. Tips for a perfect coffee

*Height adjustable coffee-spout*

You can adjust the height of the coffee-spout to your cup sizes.

*Grinding*

Please see chapter 3.5.

*Pre-warm cups*

You should warm cups in advance with hot water or steam. The smaller the quantity of coffee, the more important warming the cups is.

*Sugar an cream*

Warmth is lost by stirring the contents of the cup. Adding milk or cream from the refrigerator considerably lowers the temperature of the coffee.
